# KUROX SENTINEL SUITE

## OpenAPI 3.1.0 Specification & Architecture Reference

Autonomous Security & Pre-Trade DEX Simulation for AI Agents

---

## 1. Executive Overview & Protocol Configuration

- Publisher: Kurox Autonomous Systems
- Supported Networks: Base Mainnet (eip155:8453) & Solana Mainnet (solana:5eykt4UsFv8P8NJdTREpY1vzqKqZKvdp)
- Payment Protocol: x402 Version 2 (Exact & Upto schemes)
- Settlement Asset: Circle Native USDC (Base: 0x8335...2913 | Solana: EPjFWdd...5DA)
- Authorized Merchant Base Address: 0x80E0Ae84679b7f11bE171DaADd492FBECf628cd6
- Authorized Merchant Solana ATA: DD3A7jaXFeHcif9eYj6Vhomuxypat5Yxi8ow6wxz27yL
- Facilitators: Coinbase CDP Facilitator & PayAI Facilitator (100% Gasless Relaying)
- MCP Discovery: SEP-2127 Server Card at https://ak10082247-max.github.io/.well-known/mcp/server-card.json
- NPM Package: elizaos-plugin-kurox-sentinel (v1.0.1)

## 2. Consolidated Core Endpoints (Tiers & Pricing)

POST /v1/audit/swap-simulation-proof [RugShield 402] $0.100 USDC
State-override DEX swap simulation against live liquidity pools.

POST /v1/scan [RugShield 402] $0.010 USDC
High-frequency honeypot scanner, exact tax (bps), and LP lock audit.

POST /v1/sanitize [CanaryGuard 402] $0.010 USDC
Zero-latency prompt-injection firewall and context scrubber.

POST /v1/risk/full_audit [CanaryGuard 402] $0.100 USDC
360-degree security audit covering bytecode, drainers, and counterparty AML.

POST /v1/security/wallet-drainer-check [CanaryGuard 402] $0.050 USDC
Heuristic and bytecode detection of active wallet-draining sweeps.

POST /v1/security/mcp-tool-poisoning-audit [CanaryGuard 402] $0.050 USDC
Deep audit of MCP manifests for hidden tool poisoning and injection hooks.

POST /v1/security/agent-memory-guard [CanaryGuard 402] $0.050 USDC
Protects agent long-term memory/RAG storage against indirect prompt injection.

POST /v1/risk/institutional-token-report [RugShield 402] $0.150 USDC
Institutional 7-vector risk dossier with multi-block state simulation.

# 3. OpenAPI 3.1.0 Request & Response Schema Specifications

## RugShield: POST /v1/audit/swap-simulation-proof

Simulates pre-trade DEX swap execution with state-overrides to prevent honeypots.

Input Request Schema:

```
{
  "type": "object",
  "properties": {
    "token_address": {
      "type": "string",
      "description": "Base (0x...) or Solana token mint"
    },
    "amount_usd": {
```

Output Response Example:

```
{
  "type": "object",
  "properties": {
    "status": "success",
    "is_honeypot": false,
    "buy_tax_bps": 0,
    "sell_tax_bps": 0,
    "swap_sizes_tested": [
```

## CanaryGuard: POST /v1/sanitize

Deterministic prompt-injection firewall and context scrubber for LLM agents.

Input Request Schema:

```
{
  "type": "object",
  "properties": {
    "content": {
      "type": "string",
      "description": "Untrusted text from external web, chat, or tool output"
    },
    "strict_mode": {
```

Output Response Example:

```
{
  "type": "object",
  "properties": {
    "status": "clean",
    "risk_score": 0,
    "injection_detected": false,
    "threats_neutralized": [],
    "sanitized_content": "Scrubbed string safe for agent context",
```
